Is the cladding on your apartment building fire safe?

The NSW Government is taking action to identify unsafe cladding and ensure buildings are safe. It has also introduced new laws to ban unsafe building products from use in NSW.

Make sure your building is safe:

- Find out if your building has aluminium cladding
- Check whether your building's fire safety statement is up-to-date
- Ensure a fire safety professional has inspected any cladding
- Take immediate action to make recommended changes.

Visit cladding.fairtrading.nsw.gov.au for more information.
